Canadian Manuscript Report of Fisheries & Aquatic Sciences No.1740

Canadian Manuscript Report of Fisheries and Aquatic Sciences

These reports contain scientific and technical information that represents an important contribution to existing knowledge but which for some reason may not be appropriate for primary scientific (i.e. *Journal*) publication. They differ from Technical Reports in terms of subject scope and potential audience: Manuscript Reports deal primarily with national or regional problems and distribution is generally restricted to institutions or individuals located in particular regions of Canada. No restriction is placed on subject matter and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Manuscript Reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report will be abstracted by *Aquatic Sciences and Fisheries Abstracts* and will be indexed annually in the Department's index to scientific and technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 901-1425 were issued as Manuscript Reports of the Fisheries Research Board of Canada. Numbers 1426-1550 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Manuscript Reports. The current series name was changed with report number 1551.

Details on the availability of Manuscript Reports in hard copy may be obtained from the issuing establishment indicated on the front cover.

Rapport manuscrit canadien des sciences halieutiques et aquatiques

Ces rapports contiennent des renseignements scientifiques et techniques qui constituent une contribution importante aux connaissances actuelles mais qui, pour une raison ou pour une autre, ne semblent pas appropriés pour la publication dans un journal scientifique. Ils se distinguent des Rapports techniques par la portée du sujet et le lecteur visé; en effet, ils s'attachent principalement à des problèmes d'ordre national ou régional et la distribution en est généralement limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du Ministère des Pêches et des Océans, notamment gestion des pêches; techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les Manuscrits peuvent être considérés comme des publications complètes. Le titre exact paraît au haut du résumé de chaque rapport, qui sera publié dans la revue *Aquatic Sciences and Fisheries Abstracts* et qui figuera dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros de 1 à 900 de cette série ont été publiés à titre de manuscrits (Série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés en tant que manuscrits (Série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros allant de 901 à 1425 ont été publiés à titre de manuscrits de l'Office des recherches sur les pêcheries du Canada. Les numéros 1426 à 1550 ont été publiés à titre de Rapport manuscrits du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été changé à partir du rapport numéro 1551.

La page couverture porte le nom de l'établissement auteur où l'on peut se procurer les rapports sous couverture cartonnée.

ABSTRACT

Franzin, W.G. 1984. Bibliographies of beluga (Delphinapterus leucas), narwhal (Monodon monoceros) and walrus (Odobenus rosmarus) to June, 1982. Can. Manuscr. Rep. Fish. Aquat. Sci. 1740: iv + 20 p.

Bibliographies on beluga, narwhal and walrus were prepared as an aid to biologists and scientists of the Western Region of DFO whose task it is to manage and undertake research on these and other marine mammals of Canada's Arctic Ocean. The lists include 244 references on beluga, 99 references on narwhal and 173 references on walrus published between 1887 and mid-1982. The bibliographies are arranged in alphabetical order by author. These are active bibliographies; a word processor diskette will be maintained to allow updating as required.

Keywords: belukha; bibliographies.

RESUME

Franzin, W.G. 1984. Bibliographies of beluga (Delphinapterus leucas), narwhal (Monodon monoceros) and walrus (Odobenus rosmarus) to June, 1982. Can. Manuscr. Rep. Fish. Aquat. Sci. 1740: iv + 20 p.

On a dressé des bibliographies sur le bélouga, le narval et le morse afin d'aider les biologistes et autres scientifiques à qui le MPO (region de l'ouest) a confié l'aménagement et l'étude des mammifères marins de l'océan Arctique canadien. Les bibliographies répertorient 244 écrits sur le bélouga, 99 sur le narval et 173 sur le morse, ouvrages publiés entre 1887 et la mi-1982. Ils sont classés en ordre alphabétique, par auteur. Il s'agit de bibliographies courantes enregistrées sur la disquette d'un système de traitement de textes afin d'en faciliter la mise à jour.

Mots clés: bibliographies.

INTRODUCTION

These bibliographies were prepared as aids to biologists and scientists of the Arctic Resource Assessment and Arctic Management Research sections of the Department of Fisheries and Oceans' Western Region. It is the task of these two groups to manage and undertake research on the marine mammal resources of Canada's Arctic Ocean. The bibliographies include, in three separate sections, 244 references on beluga (Delphinapterus leucas), 99 references on narwhal (Monodon monoceros) and 173 references on walrus (Odobenus rosmarus) published between 1887 and mid-1982.

Each section is arranged alphabetically by author. Works by the same author are listed according to year of publication, the oldest appearing first. Papers written jointly with others appear after those written by the senior author alone in alphabetical order by second author. No cross references to second authors are given. Works without obvious authorship, e.g. by consulting firms, appear in the alphabetical listing by firm name. One reference is itself a bibliography (Severinghaus, N. C. 1979. Selected annotated references on marine mammals of Alaska) containing 80 references on walrus and 43 references on beluga. Some of these may be duplicated in bibliographies on these two species in this report.

CONCLUSION

Recognizing that marine mammalogy is a young and actively growing area of scientific activity and publication these bibliographies will be maintained in open files on a word processor diskette. It is expected that the file will be maintained and updated by members of the two users groups identified previously and the diskette will be in their care.

ACKNOWLEDGMENTS

Mr. Eric Marshall, Freshwater Institute librarian, assisted immensely by conducting on-line computer literature searches. Deanne Trosky assisted in collation and proofing of the files and Grace Decterow and Donna Glowacki put the information through the word processor. Dr. J. Clayton and Messrs. P. Richard and T. Strong reviewed and amended the lists. I am grateful to all these people for their help. Errors and omissions, of course, remain my responsiblity.
